

r0cketship

Business Plan & Go-to-Market Strategy

Vertical-AI sales operating system for the 1,200 micro-industries that ZoomInfo and Apollo overlook.

DOCUMENT

Strategic Plan

DATE

2026-06-01

STATUS

Draft v1 — internal

What rOcketship Already Is

This is **not** a build plan. rOcketship is **already a live, multi-tenant, white-label lead-generation platform** on production infrastructure (Vultr, Next.js, Postgres, nginx, pm2, HTTPS via Let's Encrypt). 14 build phases shipped. 164 tests green. The first white-label tenant (roofers.co) is live.

Already shipped & deployed

- **Multi-tenant chassis** — hostname routing, tenant-scoped theming, God account = rOcketship.com
- **Identity & RBAC** — roles: god / manager / customer / agent, impersonation, session auth
- **Data ingestion** — global `persons` (sha_lc_hem keyed) + per-tenant `leads` pipeline, CSV upload + per-tenant webhook (`POST /api/ingest/<tenantId>` with `x-ingest-key`), normalize → dedupe → upsert
- **Marketing site** — branded landing, /about, /how-it-works, /contact, /pricing, /partner (e-partnership application), /signup, /terms
- **Wallet & billing** — `wallets` + immutable `credit_ledger` + `payments` + `coupons` , \$50 signup bonus, age-tiered lead pricing (\$11 / \$4 / \$1.44 per lead), Stripe + PayPal + manual provider (key-gated, ready to activate)
- **ZIP subscriptions** — already coded with **three offer types**: `data` (\$1,500), `booking` (\$4,500), `epartner` (negotiated) + volume discount ladder (2nd ZIP -10%, 3rd -20%, 4th+ -30%), recurring monthly invoices, leads free inside subscribed ZIPs
- **Lead delivery + CRM** — pool filtering by zip/segment/tier/score, atomic wallet debit, PII hidden until purchase, customer CRM with stats/notes/CSV export, outbound webhook per customer
- **Affiliate program** — 10% commission on referred top-ups, `?ref=` capture, customer `/affiliate` page
- **Tenant provisioning wizard** — `/admin/launch` (god) creates new white-label in minutes: domain, niche, hero image/video/headline/subhead/offers/features/theme/colors/logo/fee-rate/data-cost-rate
- **Stripe + PayPal adapters** — built, key-gated, activate when sandbox keys pasted in `/admin/integrations`
- **Email + booking engine** — nodemailer SMTP, tracked booking redirects (`/api/book/[delivery]` marks delivery `booked`), per-customer email template, key-gated
- **Twilio call-center dialer** — `agent` role, calls table with dispositions (no_answer/left_msg/callback/hot_transfer/booked/sold/dead), click-to-call, hot-transfer numbers, agent KPIs, key-gated
- **v2 predictive engine** — heuristic scoring (intent tier + cross-site converted +30 + recency + commercial), `/admin/insights` with nationwide counts + top ZIPs + top predictive leads
- **Premium design system** — Plus Jakarta Sans / Inter / Fraunces, three site styles (trust/bold/dark), themable per tenant, primitives & charts components, AppShell + AppNav for customer app, MarketingNav for public, ImpersonationBanner

- **Admin redesign + economics** — left dark sidebar with rocket-bullet nav, per-tenant P&L, god platform dashboard (revenue/GP/sales + area + bar by white-label), 60% platform fee / 40% white-label split visible
- **SEO/AEO** — host-aware metadata, JSON-LD @graph, dynamic sitemap + robots per tenant, niche directory page (`/niches`), mobile menus
- **Integrations hub** — `/integrations` public page listing 9 easy-API CRMs (GoHighLevel/HubSpot/Zapier/Make/Pipedrive/Salesforce/Keap/ActiveCampaign/Zoho), inbound data webhook docs in admin, CRM push guide for customers

The economic model already coded

- **rOcketship takes 60% of every white-label sale** (platform/data revenue)
- **White-label keeps 40%** (their lift after data cost)
- Per-tenant `platform_fee_rate` (default 0.60) and `data_cost_rate` (default 0.00) — tunable per partner
- God dashboard shows platform revenue, gross profit, and 60%-by-white-label bar chart
- Each white-label sees the 60% as a COST on their P&L (transparency, not hidden)

What's left (small)

- Hardening: rate-limit/email-verify `/signup` (\$50-bonus abuse), DOMPurify on footer/email HTML
- Scale: push in-memory pool/predictive/global-counts scans to SQL at 100k+ rows
- Stripe subscription auto-charge (subscription invoices still manual)
- Per-niche dedicated SEO landing pages (template ready, just need niche content)
- New-domain go-live still a manual operator step: DNS → 137.220.56.129 + nginx server_name + certbot

Implication: new SKU launch is no longer a "build week." It's **~1–2 hours of platform work** (DNS, nginx, certbot, `/admin/launch` wizard) + **the marketing engine for that niche** (ad creative, lead magnet copy, data sourcing if not already ingested). That changes everything about the deployment plan.

Executive Summary

rOcketship is a **deployed, white-label, multi-tenant lead-generation platform** that monetizes a \$100k/yr predictive-data stack across an unbounded portfolio of niche-branded sites. The platform handles tenant provisioning, theming, data ingestion, lead pricing, wallet/subscriptions, CRM, affiliate, dialer, email, and Stripe/PayPal — all built. The remaining work is **GTM**: choose the highest-LTV niches, spin up tenants via the existing wizard, drive traffic, and operate the SDR/closer team that monetizes Tier 2 (\$4,500/mo booking) and JV (negotiated success-fee).

Target outcome: \$100M ARR within 3 years, \$1B valuation at 8–10x revenue, ~2,400 customers at \$42k blended ACV. Reachable faster than typical SaaS because the platform is already operational and the unit economics (60% take rate, ~85% software margin on Tier 1) are exceptional.

Pricing Tiers (already coded as ZIP subscription offers)

OFFER TYPE IN DB	PRICE	WHAT'S INCLUDED	GROSS MARGIN	BUYER
data	\$1,500/mo	Predictive intent + ZIP exclusivity + CRM sync + DNC-clean + 5-yr retrospective + weekly refresh + compliance-disclaimed	~85%	SMB owner running own outbound
booking	\$4,500/mo	All of data + AI/agent-assisted real-time appointment setting + dedicated success manager	~55%	Owner outsourcing the dial motion
epartner	Negotiated (\$4,500/mo + 10–25% of closed revenue, or per-deal success fee)	All of booking + we run the closing motion as an extension of their team	30–50% + upside	Operator with proven LTV who wants a partner

Volume discounts already coded: 2nd ZIP –10%, 3rd –20%, 4th+ –30%.

Blended ACV target: **\$42,000/customer/year** (50% Tier 1 / 40% Tier 2 / 10% Tier 3 with \$5k/mo JV add-on)

Portfolio of 12 SKUs — Scored & Ranked

Scoring: Demand (search vol + competitor count + ad CPC heat), Revenue (blended ACV × retention × upsell × win rate), +1 adjacency bonus if it inherits the existing roofers.co playbook.

\$1B Valuation Path

Comps (2026)

- ZoomInfo — public, ~\$5–6B mkt cap, ~6x revenue (decelerating)
- 6sense — private, ~\$5.2B (12–15x revenue, intent-data thesis)
- Clay — private, ~\$1.25B at 2025 round (~30x revenue, AI-enrichment thesis)
- Apollo.io — private, ~\$1.6B (5–7x revenue)
- Cognism / Lusha / LeadIQ — \$300M–\$1.5B

Multiple target: 8–10x revenue

(vertical-AI platform + NRR >115% + GM >65% + 60% take rate + already-deployed = premium)

TARGET VALUATION	REQUIRED ARR	CUSTOMERS @ \$42K BLENDED ACV
\$250M (Series B exit-ready)	\$30M	~715
\$500M	\$60M	~1,430
\$1B	\$100M	~2,400
\$2B	\$200M	~4,800

Equity narrative (revised, stronger)

"rOcketship is the deployed vertical-AI sales platform for the 1,200 micro-industries that ZoomInfo and Apollo overlook. Unlike data resellers, we own the full stack from data ingestion to closed-deal revenue share — built and live: multi-tenant platform, white-label provisioning wizard, ZIP-exclusive subscriptions (\$1,500 / \$4,500 / JV), AI booking, integrated dialer, CRM, affiliate, and a 60% platform take-rate already coded into every transaction. Each new vertical = a new branded white-label deployed in hours via our wizard. Year 1 target: 30+ verticals, \$5M ARR. Year 3: 80 verticals, \$100M ARR. Year 5: 200 verticals, \$250M ARR — IPO scale."

Milestones the market needs to see

- **Year 1:** 12–20 white-labels live, \$3–5M ARR, NRR ≥110%, ≥10% revenue from **booking** tier

- **Year 2:** 30–50 white-labels, \$15–25M ARR, NRR $\geq 120\%$, 15%+ epartner revenue, two \$1M+ JV partners
- **Year 3:** 60–80 white-labels, \$50–100M ARR, NRR $\geq 125\%$, gross margin $\geq 65\%$
- **Year 5:** 150–200 white-labels, \$200M+ ARR — IPO/strategic exit

52-Week Deployment Plan (revised — provision, not build)

Since the platform is shipped, each weekly "launch" is now ~1–2 hours of platform work + a marketing engine spin-up. We can run **more than 1 per week** with one engineer + one marketer, but we'll pace at 1/week so the SDR team can ramp on each new niche before the next one drops.

Pre-flight (Week 1 only — small hardening + readiness)

- W0/W1: Activate Stripe + Twilio + SMTP in `/admin/integrations` with real keys; rate-limit `/signup`; finalize Subscription auto-charge via Stripe Billing (currently manual invoices); spin up first SDR and first closer; finalize ad creative templates; finalize lead magnet template

Wave 1 — Weeks 2–9 — extend the roofers.co playbook (adjacent contractor verticals)

Each week: register domain → DNS → nginx + certbot → `/admin/launch` wizard → ad creative → SDR scripts
 - W2 SolarSignal · W3 CommercialRoofing.Pro · W4 HVACPipeline · W5 ContractorLeads.Live · W6 ElectricalPro.Live · W7 PlumbingPipeline · W8 ConcreteIntel · W9 WindowAndDoorPro

Wave 2 — Weeks 10–17 — B2B sales + agencies + specialty finance

- W10 Pipeline.Weekly · W11 AgencyVault · W12 MortgageHeat · W13 WealthScope · W14 TaxCreditPro · W15 M&AScope · W16 LifeEventAlerts · W17 FamilyOfficeIntel

Wave 3 — Weeks 18–29 — medical & regulated

- W18 SurgicalCenterIntel · W19 VetSpecialty.Live · W20 HospicePipeline · W21 DentalImplantLab.Live · W22 IVFConnect · W23 TMS.Live · W24 CompoundingRx · W25 ConciergeMedicine · W26 AestheticPractice · W27 BehavioralHealthIntel · W28 PatientPulse · W29 MedDeviceB2B

Wave 4 — Weeks 30–41 — industrial & energy

- W30 AutomationIntegrator.Pro · W31 AerospaceMachining · W32 DefenseSubcontractor · W33 DataCenterEC · W34 EVFleetPro · W35 BatteryStorage.Live · W36 GeothermalPro · W37 HydrogenIntel · W38 CarbonCapturePro · W39 IndustrialCoatings · W40 HeavyLift.Live · W41 FabricationPro

Wave 5 — Weeks 42–52 — specialty professional / lifestyle / GovCon

- W42 GovConPipeline · W43 MassTortIntel · W44 PatentPipeline · W45 ImmigrationIntel · W46 SuperyachtPro · W47 PrivateAviation.Live · W48 SelfStorageIntel · W49 DataCenterDev.Pro · W50 SeniorHousingIntel · W51 NetLeaseIntel · W52 PortfolioReview (kill bottom 8, double ad spend on top 10)

Per-launch checklist (repeatable, ~6 hours work spread over 1 week)

Mon (operator, ~1 hour): 1. Register domain 2. DNS A + AAAA → 137.220.56.129 3. Add nginx server_name + run certbot 4. `/admin/launch` : niche + style + colors + hero image/video + headline + subhead + 3 offers (`data $1,500` , `booking $4,500` , `epartner negotiated`) + features per offer + fee/data-cost rates

Mon–Tue (marketer, ~3 hours): 5. Hero image/video shot or sourced (2400×1400 JPG/WebP <400KB OR 1920×1080 H.264 <5MB) 6. Ad creative (Meta + LinkedIn + Google) variants — 3 hooks × 3 visuals 7. Lead magnet copy ("50 free [niche] leads in your ZIP")

Wed (data ops, ~1 hour): 8. Pull niche-specific persons via ingest pipeline (CSV upload or webhook), verify counts in `/admin/data`

Thu (SDR lead, ~1 hour): 9. SDR script + objection handlers + qualifying questions for the niche 10. Twilio dialer queue configured + agent assigned

Fri (launch): 11. Ads go live at \$500–1,000 spend 12. SDR starts dialing inbound leads 13. CPL/CAC dashboard monitored

Kill / scale criteria (gate at week 4 per SKU)

- **Kill** if: CAC > 1.5x first-month payment AND no `booking` -tier upgrades within 60 days
- **Scale** if: CAC < first-month payment AND ≥10% of buyers upgrade to `booking` within 60 days → 5x ad spend, hire dedicated SDR

Team & Org (next 6 months)

You already have the platform. The hiring focus is the **revenue engine**, not the build:

- **Founder/CEO (you)** — vision, JV deals, partner relationships, ad creative direction
- **1 platform engineer (existing)** — keep maintenance work + small hardening (rate-limit signup, DOMPurify, Stripe subscription auto-charge, per-niche SEO pages)
- **1 marketer/creator** — owns per-SKU funnels, ad creative, lead magnets, video production
- **2 SDRs** — Wave 1 SKUs at first, then specialized as portfolio expands; agent role in the platform
- **1 closer / AE** — runs `booking` + `epartner` conversations, owns conversion to Tier 2/3
- **1 ops / fulfillment** — runs the dialer, manages handoffs, manages SMTP campaigns, runs the AI booking workflow
- **1 fractional CFO + counsel** — epartner contracts, billing structure, fundraise prep

CAC / payback per tier

TIER	TARGET CAC	PAYBACK	LTV (24-MO)
data (\$1,500)	<\$1,500	1 month	\$30k+
booking (\$4,500)	<\$3,000	<1 month	\$90k+
epartner (JV)	<\$5,000 + relationship	<2 months	\$250k+

Branding & Website Architecture (already in place)

- Parent brand: **r0cketship.com** (God account) — rocket motif, "Your unfair advantage," predictive intent + ZIP exclusivity positioning
- First white-label live: **roofers.co**
- Hub **/niches** page already exists for cross-linking all white-labels
- Each new white-label gets:
 - Its own domain (preferred for SEO + ad relevance + buyer trust)
 - Theme/color picker via **/admin/branding**
 - Hero image/video + headline/subhead via admin
 - Inherits 3 offers (**data** , **booking** , **epartner**) automatically
 - SEO/AEO host-aware metadata + JSON-LD + dynamic sitemap

Strategy: keep niche domains separate (proven to convert 3–5x better on paid ads than generic data domains), with r0cketship.com as the parent corporate brand and **/niches** as the master directory.

Risks & Mitigations

RISK	MITIGATION
Data source dependency (Apollo, etc.)	Diversify across 5+ sources; build first-party intent capture via lead magnets
Compliance (TCPA, GDPR, CCPA, DNC)	DNC-scrub is core; legal review per vertical (esp. healthcare, financial)
AI booking agent quality	Start with human-in-the-loop (agent role exists), ramp automation per niche; track booking-to-show rate
Channel concentration (Meta / LinkedIn algorithm shifts)	Diversify per SKU; build SEO long-tail per niche (template ready, content needed)
Cannibalization between white-labels	Disciplined ICP definition per brand; share-of-buyer audit quarterly
JV partners default on revenue share	Standardized epartner contracts; advance + monthly reconciliation; cap exposure
\$50 signup-bonus abuse	Rate-limit + email-verify /signup (small hardening, ~1 day)
Scale (in-memory pool scans)	Push to SQL queries at 100k+ rows (hardening, ~1 sprint)

Immediate Next Steps

1. Founder approves this revised spec
2. Pick first 4 niches for Wave 1 launches (recommendation: **SolarSignal**, **CommercialRoofing.Pro**, **MortgageHeat**, **AgencyVault** — different ad channels, different buyers = clean A/B/C/D test)
3. Decide pre-flight hardening priorities (Stripe subscription auto-charge, /signup rate-limit, per-niche SEO pages — pick what's blocking \$-flow)
4. Hire/contract the marketing creator + first SDR
5. Move to writing-plans skill for the Wave-1 launch playbook (the exact repeatable 6-hour-per-niche script)
