DOCUMENT

Operational Runbook

DATE

2026-06-01

STATUS

Draft v1 — internal

**Owner:** Operator / Marketer / Data Ops / SDR Lead — distributed **Goal:** Spin up one new white-label niche site per week with ads live by Friday EOD.

## 0. Prerequisites (one-time, do once before Wave 1 starts)

### 0.1 Pre-flight hardening (engineer, 1 sprint)

- [ ] Stripe subscription auto-charge wired (currently monthly invoices are manual — blocks scale at >50 customers)
- [ ] `/signup` rate-limit + email-verify (closes the \$50-bonus abuse vector)
- [ ] DOMPurify on footer/email HTML (XSS hardening)
- [ ] Per-niche dedicated SEO landing page templates ( `/[slug]-leads-in-[zip]` for AEO)

### 0.2 Integration keys live in `/admin/integrations`

- [ ] Stripe live/prod keys + webhook secret
- [ ] PayPal live/prod keys (backup payment route)
- [ ] SMTP credentials (host/port/user/pass/from) — production email sender (SendGrid, Postmark, or AWS SES recommended)
- [ ] Twilio account SID + auth token + verified caller IDs
- [ ] Hot-transfer phone number(s) for agent role

### 0.3 Team in seats

- [ ] 1 marketer/creator hired (owns ad creative + hero assets + lead-magnet copy)
- [ ] 1 SDR hired (works /agent role — Twilio dialer, scripts, dispositions)
- [ ] 1 closer/AE in seat (handles `booking` and `epartner` upgrades)
- [ ] 1 ops/fulfillment in seat (runs the AI booking workflow, SMTP campaigns, escalations)

### 0.4 Asset library (built once, used every launch)

- [ ] **Ad creative master file** (Figma) with locked layout templates — variables: `[NICHE]` , `[CITY/ZIP]` , `[STAT]` , `[CTA]`
- [ ] **Lead magnet master copy** ( `50 free [NICHE] leads in your ZIP, delivered to your CRM` )
- [ ] **SDR call script master** (intro + 3 qualifying questions + objection handlers + booking ask)
- [ ] **Email drip master** (Day 0 welcome → Day 2 social proof → Day 5 booking ask → Day 14 upgrade ask)

# 1. Weekly Launch Cycle — 6 hours of work over 5 days

## Friday before launch week (Operator, 30 min)

1. **Pick the niche** — pull from the 52-week deployment plan (see business plan spec)
2. **Domain check** — run availability check on preferred domain + 2 alternates - Preferred naming: `[verb]` `[niche].com` / `[niche].live` / `[niche]signal.com` / `[niche]heat.com` - Examples already mapped: SolarSignal, CommercialRoofing.Pro, MortgageHeat, AgencyVault
3. **Register domain** at Namecheap or Cloudflare (use Cloudflare for DNS speed + free SSL fallback)
4. **Brief the marketer** with niche + persona one-liner ("commercial roofers doing \$1M+/yr, owner-operator, hates spam, wants exclusive ZIP")
5. **Brief data ops** with niche + filter criteria (SIC code(s), revenue band, geography focus)

## Monday — Operator (1 hour)

### Step 1: DNS (5 min)

At your registrar, add:

| Type | Host | Value          |
|------|------|----------------|
| A    | @    | 137.220.56.129 |
| A    | www  | 137.220.56.129 |

Wait 5–60 min for DNS to propagate. Test:

```
dig +short [newdomain].com
# Should return: 137.220.56.129
```

### Step 2: nginx server\_name block (10 min)

SSH to the box:

```
ssh r0cketship
```

Edit `/etc/nginx/sites-available/r0cketship` — add the new domain to the existing `server_name` line:

```
server_name roofers.co www.roofers.co r0cketship.com www.r0cketship.com [newdomain].com www.[newdo
```

Test config & reload:

```
nginx -t && systemctl reload nginx
```

### Step 3: certbot for HTTPS (5 min)

```
certbot --nginx -d [newdomain].com -d www.[newdomain].com --non-interactive --agree-tos -m admin@r
```

Verify HTTPS:

```
curl -I https://[newdomain].com  
# Should return 200 (will show parent site until tenant is created)
```

### Step 4: `/admin/launch` wizard (30 min)

Go to <https://r0cketship.com/admin/launch> (login as god: jeff.cline@me.com). Fill in:

| FIELD                           | VALUE                                                                                                                                                                                         |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Domain                          | <code>[newdomain].com</code> (no protocol, no www)                                                                                                                                            |
| Niche                           | e.g., <code>commercial roofing</code>                                                                                                                                                         |
| Money word                      | e.g., <code>Commercial Roofing</code> (used in hero + brand voice)                                                                                                                            |
| Site style                      | bold / trust / dark (pick per niche — bold for sales/aggressive niches, trust for healthcare/financial, dark for tech)                                                                        |
| Brand colors                    | Primary + accent hex picked from niche-color guide (see §3.2)                                                                                                                                 |
| Logo                            | Upload niche-specific logo (or generate via DALL-E / Midjourney with rocket motif + niche imagery)                                                                                            |
| Hero image / video              | Paste URL or upload (specs in §3.1)                                                                                                                                                           |
| Hero headline                   | "High-intent [niche] customers actively looking in your exclusive ZIP"                                                                                                                        |
| Hero subhead                    | "Delivered daily to your CRM. DNC-clean. No card to start."                                                                                                                                   |
| Offer 1 — <code>data</code>     | Price: 1500, Features: ["ZIP-exclusive lead pool", "Updated daily", "DNC-clean", "5-yr retrospective", "CRM sync (HubSpot, GHL, Salesforce, Pipedrive, Close, Zoho)"]                         |
| Offer 2 — <code>booking</code>  | Price: 4500, Features: ["Everything in Data", "AI-assisted real-time appointment setting", "Booked meetings on your calendar", "Dedicated success manager", "Hot transfer to your sales rep"] |
| Offer 3 — <code>epartner</code> | Price: 4500 + revenue share, Features: ["Everything in Booking", "We close deals as an extension of your team", "Monthly base + backend success fee", "Negotiated terms"]                     |
| Platform fee rate               | 0.60 (default — adjust only for negotiated partners)                                                                                                                                          |
| Data cost rate                  | 0.00 (default — adjust if you're sourcing premium data for this niche)                                                                                                                        |
| Signup bonus credits            | 50 (default — equals \$50 of free leads at age-tier \$11/\$4/\$1.44)                                                                                                                          |
| Footer copy                     | Disclaim: "All leads DNC-scrubbed. Compliance: TCPA, GDPR, CCPA. Use only for permitted purposes."                                                                                            |

Save. Visit `https://[newdomain].com` — the new site should render with your config.

## Step 5: Verify tenant works (10 min)

- [ ] Marketing landing renders with your hero
- [ ] `/pricing` shows all 3 offers
- [ ] `/signup` creates a test customer + auto-grants \$50 wallet credit
- [ ] `/leads` shows the lead pool (filtered by ingest)
- [ ] `/integrations` page renders with CRM grid

## Monday–Tuesday — Marketer (3 hours)

### 3.1 Hero asset (1 hour)

**Static image specs:** - Resolution: 2400×1400 (or larger, cropped to 16:9) - Format: JPG or WebP - Size: <400KB (compress via Squoosh or TinyPNG) - Subject: niche-relevant, no baked-on text, centered subject, room for overlay - Lighting: warm, professional, not stock-looking

**Video specs (preferred — 3–5x engagement on landing):** - Resolution: 1920×1080 minimum (1280 is OK if source-limited) - Format: H.264 MP4 - Audio: muted (autoplay won't work with audio) - Length: 6–12 seconds, loops cleanly - Size: ≤5MB (compress via ffmpeg or Handbrake) - Compression command (run on box if you have raw source):

```
ffmpeg -i source.mp4 -vf "scale=1280:-1" -movflags +faststart -c:v libx264 -crf 28 -preset slow -a
```

Upload via `/admin/branding` (per-tenant) — sets `hero_video` and/or `hero_image`. Poster image auto-generated.

### 3.2 Niche color guide (use this for the `/admin/launch` color picker)

| NICHE FAMILY                      | PRIMARY                        | ACCENT                         | STYLE |
|-----------------------------------|--------------------------------|--------------------------------|-------|
| Solar / clean energy              | <b>#FFB400</b> (sun gold)      | <b>#0EA5E9</b> (sky blue)      | bold  |
| Commercial roofing / construction | <b>#1E40AF</b> (deep blue)     | <b>#F97316</b> (safety orange) | bold  |
| Mortgage / finance                | <b>#065F46</b> (money green)   | <b>#FBBF24</b> (gold)          | trust |
| Marketing agencies                | <b>#7C3AED</b> (violet)        | <b>#06B6D4</b> (cyan)          | dark  |
| Healthcare / medical              | <b>#0891B2</b> (clinical blue) | <b>#10B981</b> (vital green)   | trust |
| Legal                             | <b>#1F2937</b> (charcoal)      | <b>#B45309</b> (oxblood)       | trust |
| Industrial / defense              | <b>#374151</b> (steel gray)    | <b>#DC2626</b> (alert red)     | dark  |
| Real estate / brokers             | <b>#1E3A8A</b> (navy)          | <b>#F59E0B</b> (gold)          | trust |
| Hospitality / luxury              | <b>#000000</b> (black)         | <b>#D4AF37</b> (champagne)     | dark  |
| Cannabis / agriculture            | <b>#166534</b> (deep green)    | <b>#FACC15</b> (sun yellow)    | bold  |

### 3.3 Ad creative templates (2 hours)

Master template (substitute **[NICHE]** , **[STAT]** , **[CITY]** per launch):

#### Hook A — Pain-led:

*"Tired of stale [NICHE] lists everyone else has? Get the ones actively looking — DNC-clean, ZIP-exclusive, in your CRM tomorrow morning."*

#### Hook B — Outcome-led:

*"[NUMBER] [NICHE] businesses booked discovery calls last month from our predictive engine. Get the next batch in your ZIP. 50 free leads."*

#### Hook C — FOMO/exclusivity-led:

*"We only sell each ZIP code once. [CITY] is open. After today, your competitor gets it. Claim your ZIP — 50 free leads first."*

**Visual treatment options:** 1. Hero shot — clean product shot of the platform UI with niche-specific data 2. Social proof — customer testimonial with face + outcome stat 3. Before/after — pipeline before (empty CRM)

vs. after (full CRM with notes)

**Channels & creative count for launch:** - **Meta (Facebook/Instagram):** 9 ads = 3 hooks × 3 visuals at \$200/day starting budget - **LinkedIn:** 3 ads = focus on Hook B (outcome-led) + visual #2 (social proof) at \$100/day starting budget — only for B2B niches - **Google Search:** Bid on `[niche] leads`, `buy [niche] leads`, `[niche] prospecting`, `predictive [niche] data` — \$50/day cap to start

### 3.4 Lead magnet copy

Use the niche-substituted master:

***Get 50 Free [NICHE] Leads in Your ZIP** Sign up, pick your ZIP, and we'll send 50 high-intent [NICHE] prospects straight to your CRM today. DNC-clean. Updated weekly. No card. Cancel anytime.*

CTA button: **"Claim My 50 Free Leads"**

## Wednesday — Data Ops (1 hour)

### 4.1 Source the niche-specific persons

Use the platform's ingest pipeline. Either:

**Option A — CSV upload (best for one-time backfill):** 1. Query your data stack (Apollo + intent + DataForSEO) with niche-specific filters 2. Export CSV in `audience_export` format (the format the platform expects) 3. Go to `/admin/data` → "Upload CSV" 4. Confirm row count + tier distribution (real\_time / one\_week / thirty\_day / older)

**Option B — Webhook (best for ongoing weekly refresh):** Configure your data stack to POST to:

```
POST https://[newdomain].com/api/ingest/[tenantId]
Header: x-ingest-key: [ingest-key-from-admin-data]
Body: JSON or CSV (audience_export format)
```

Schedule weekly (Mondays 3am UTC recommended so leads are fresh for Monday morning).

### 4.2 Verify lead pool

- [ ] `/admin/data` shows expected counts by tier/segment/zip
- [ ] `/leads` (as a test customer) shows filterable lead pool
- [ ] Preview hides PII until purchase (privacy check)

## Thursday — SDR Lead (1 hour)

**5.1 SDR call script template** (substitute `[NICHE]`, `[BUSINESS NAME]`, `[CITY]`)

### Opening (3 seconds — earn the right to keep talking):

*"Hi, this is [NAME] from rOcketship. We sent 50 free leads to [BUSINESS NAME] this morning — I'm calling to make sure they're the right fit. Got 30 seconds?"*

**Qualifying (3 questions):** 1. "What's your typical close rate on cold leads vs. warm referrals?" 2. "If we delivered 100 high-intent [NICHE] prospects per month in your ZIP, what's that worth to you?" 3. "Who closes the deals today — you, a team, or are you looking for help?"

### Pitch (anchor on the booking offer):

*"Most of our [NICHE] customers start on the \$1,500/mo data plan, but the ones who 10x their pipeline upgrade to \$4,500 where we book the meetings on their calendar in real time. Which sounds more like where you are?"*

### Objection handlers:

| OBJECTION                          | RESPONSE                                                                                                                          |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| "Too expensive"                    | "Versus what? One closed [NICHE] deal pays for 6 months. We give you 50 free to prove it."                                        |
| "I already have leads"             | "Great — are they ZIP-exclusive? Ours are. Your competitor across town can't have them."                                          |
| "I need to think about it"         | "Totally fair. Lock your ZIP for \$1,500 now so it doesn't go to your competitor — refund anytime in 30 days if it doesn't work." |
| "I don't believe the data quality" | "We'll send you a sample of 10 with full contact info before you pay anything. Email or text?"                                    |
| "Send me info"                     | "Of course — but let me grab your calendar first. 15 mins Tuesday or Wednesday?"                                                  |

### Booking ask (the only KPI that matters):

*"Let's get 15 minutes on your calendar to walk through your ZIP. I have Tuesday at 2pm or Wednesday at 10am — which works?"*

## 5.2 Twilio dialer queue config

In `/admin/integrations` (god): - [ ] Verify Twilio keys live - [ ] Set `hot_transfer_number` for this tenant (the closer's direct line)

In `/admin/users` (god/manager): - ☐ Create or assign agent role to your SDR - ☐ Verify they can log into `/agent` and see queue

SDR's daily workflow at `/agent` : 1. Click "Next Lead" → platform serves highest-predictive-score unworked lead from the pool 2. Click "Call" → Twilio click-to-call dials lead, connects SDR 3. After call, log disposition: no\_answer / left\_message / callback / hot\_transfer / booked / sold / dead 4. KPI dashboard shows daily calls, connects, bookings, conversion rate

## Friday — LAUNCH (Operator + Marketer joint, 30 min)

### 6.1 Final pre-launch checklist

- ☐ Domain resolves with HTTPS + parent landing
- ☐ Tenant created and renders branded site at the domain
- ☐ `/leads` populated with niche-specific data
- ☐ `/signup` works end-to-end (test signup → \$50 credit → /leads → buy test lead)
- ☐ Stripe/PayPal/SMTP/Twilio integrations active (or manual fallback confirmed)
- ☐ SDR briefed and ready to dial

### 6.2 Go-live

1. **Meta ads** — enable 9 ad variants at \$200/day. Audience: niche-specific lookalike or interest-based; geo: US (or service area if hyperlocal). Optimization: lead form fills.
2. **LinkedIn ads** (B2B niches only) — enable 3 ad variants at \$100/day. Audience: job titles like "[Niche] Owner", "[Niche] Manager", "President of [Niche company]". Optimization: leads.
3. **Google Search** — enable campaign at \$50/day cap. Negative keywords: "free", "torrent", "lyrics", "job".
4. **Email** — send "we're live" announcement to any warm list you have for this niche
5. **Tracking** — verify Meta pixel + Google tag + LinkedIn Insight tag firing on landing + signup + purchase events

### 6.3 Monitoring (every 4 hours for first 48 hours)

- CPL (cost per lead = ad spend / signups) — target <\$100 for B2B niches, <\$30 for consumer/SMB
- Signup → first-purchase conversion — target ≥30% inside 7 days (free \$50 wallet helps)
- SDR dial volume + connect rate — target 50+ dials/day, 15%+ connect, 10%+ booking from connects
- Wallet top-ups — first paid purchase by Day 3 is the trust signal

## 2. Week 2–4: Monitor & Decide

### Kill / scale gate at Day 28

KILL if:

- CAC > 1.5x first-month payment (e.g., CAC > \$2,250 against \$1,500 data tier) AND
- No **booking** upgrades within 60 days
- Action: pause ads, archive landing, redirect domain to /niches hub, document the learning

#### SCALE if:

- CAC < first-month payment AND
- $\geq 10\%$  of buyers upgrade to **booking** within 60 days
- Action: 5x ad budget (\$1,000+/day), hire dedicated niche SDR, add 2 more ad creative variants, double down on the winning channel

#### IF AMBIGUOUS (most launches):

- Run a Week 5–8 retry with 2 new creative variants and 1 new lead-magnet test
- Re-evaluate at Day 56

## 3. Worked Examples — First 4 Wave-1 Niches

Each example is ready to paste into **/admin/launch** and ship Monday.

### Example 1 — SolarSignal (solarsignal.com — Solar/HVAC/Roofing)

| FIELD              | VALUE                                                                              |
|--------------------|------------------------------------------------------------------------------------|
| Domain             | solarsignal.com                                                                    |
| Niche              | solar, HVAC, roofing                                                               |
| Money word         | Solar                                                                              |
| Site style         | bold                                                                               |

| SDR niche question | "What's your average funded loan amount and commission?"                                      |
| Lead magnet        | "50 free mortgage-intent homeowners in your ZIP — refi + purchase, scored by likelihood"      |
| Ad channel mix     | Meta 50% / Google 40% / LinkedIn 10%                                                          |

#### Example 4 — AgencyVault (Marketing agencies, white-label resellers)

| FIELD              | VALUE                                                                                |
|--------------------|--------------------------------------------------------------------------------------|
| Domain             | agencyvault.io                                                                       |
| Niche              | marketing agency, lead-gen agency                                                    |
| Money word         | Agency                                                                               |
| Site style         | dark                                                                                 |
| Primary color      | <span>#7C3AED</span> (violet)                                                        |
| Accent color       | <span>#06B6D4</span> (cyan)                                                          |
| Hero headline      | "White-label predictive leads + booking for your agency's clients — branded as you"  |
| Hero subhead       | "API + dashboard + CRM sync + DNC-clean. Resell at your markup. 30-day pilot."       |
| Offer 1 data       | \$1,500/mo (single client) — or \$4,500/mo unlimited clients                         |
| Offer 2 booking    | \$4,500/mo + per-client setup — "We book meetings for your clients under your brand" |
| Offer 3 epartner   | "We co-sell with you. Rev share on closed business."                                 |
| SDR niche question | "How many clients, what verticals, what's your blended retainer?"                    |
| Lead magnet        | "Free 30-day pilot: pick one client, we'll deliver leads under your brand, no card"  |
| Ad channel mix     | LinkedIn 70% / Google 30% — Meta skip (B2B SaaS pattern)                             |

## 4. KPI Dashboard (what to track every week)

Per white-label, per week:

## 5. Common Failures & Their Fixes

| SYMPTOM                             | LIKELY CAUSE                                              | FIX                                                                                              |
|-------------------------------------|-----------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| High CPL, low signups               | Wrong hook for the niche                                  | Test all 3 hooks (pain / outcome / FOMO) — most niches respond to one strongly                   |
| Signups but no paid conversions     | Free tier too generous OR data quality bad                | Pull a paid customer to QA the leads they see — if PII is wrong or stale, fix data source        |
| Paid but no <b>booking</b> upgrades | Price anchor wrong OR onboarding doesn't sell the upgrade | Add upgrade prompt at Day 7 of customer lifecycle; train SDR to pre-position \$4,500 from call 1 |
| <b>epartner</b> deals stalling      | Contract friction                                         | Standardize the epartner contract; cap exposure with monthly reconciliation + advance            |
| Lead pool runs dry                  | Niche too small OR ingest rate too low                    | Either expand geographic scope OR refresh ingest cadence to daily                                |
| SDR burning out                     | Niche has wrong buyer profile                             | Move SDR to a different SKU within the portfolio; not all niches have the same persona-fit       |

## 6. Escalation & Decisions

- **Niche kill decision** — only the founder or designated portfolio manager can kill a SKU before Day 56
- **Ad spend >\$1k/day decision** — needs founder approval first time; subsequent niches use whatever budget the playbook scaled to last time
- **Pricing deviation** — never deviate from \$1,500 / \$4,500 / negotiated. Volume discounts (already coded: 2nd ZIP -10%, 3rd -20%, 4th+ -30%) are the only allowed concession.
- **Custom features per partner** — say no. Direct them to existing offers. The operational moat is uniformity.

## 7. Next 8 weeks roadmap (Wave 1)

| WEEK | MONDAY LAUNCH         | OPERATOR HOURS | MARKETER HOURS | DATA HOURS | SDR HOURS |
|------|-----------------------|----------------|----------------|------------|-----------|
| 2    | SolarSignal           | 1              | 3              | 1          | 1         |
| 3    | CommercialRoofing.Pro | 1              | 3              | 1          | 1         |
| 4    | MortgageHeat          | 1              | 3              | 1          | 1         |
| 5    | AgencyVault           | 1              | 3              | 1          | 1         |
| 6    | HVACPipeline          | 1              | 3              | 1          | 1         |
| 7    | ContractorLeads.Live  | 1              | 3              | 1          | 1         |
| 8    | ElectricalPro.Live    | 1              | 3              | 1          | 1         |
| 9    | PlumbingPipeline      | 1              | 3              | 1          | 1         |

**By Week 9:** 8 white-labels live, \$50–100k ad spend total invested, 200+ signups, 60+ paying customers across the portfolio, first **booking** upgrades closing, first **epartner** deals in pipeline.

**Week 10 review gate:** sort all 8 white-labels by composite metric (paid customers × ACV × NRR), kill bottom 2, double ad budget on top 2, start Wave 2.

## Appendix A — Domain Registration Checklist

- [ ] Domain available + costs <\$50/yr (avoid premium domain markets unless niche is gold)
- [ ] No trademark conflicts (USPTO TESS search)
- [ ] No **.com** squatters — **.com** preferred, **.live** / **.pro** / **.io** acceptable
- [ ] Whois privacy enabled
- [ ] Domain set to auto-renew

## Appendix B — Compliance Pre-Launch Check

- [ ] Footer disclaimer present (TCPA, GDPR, CCPA, DNC)
- [ ] Terms of Service link in footer + signup flow
- [ ] Privacy policy link in footer + signup flow
- [ ] Cookie banner active (GDPR/CCPA states)
- [ ] DNC scrubbing confirmed on all leads in this niche's pool
- [ ] Healthcare niches: HIPAA-aware language, no PHI in leads
- [ ] Financial niches: GLBA-aware language, no SSN/financial PII in leads

- [ ] Legal niches: bar-rule-compliance language ("legal advertising")

## Appendix C — When to Pause Spend

Pause Meta/LinkedIn/Google ads if: - CPL > 3x target for >48 hours - Signups but zero paid conversions for >7 days - SDR can't keep up with inbound (good problem — pause ads, hire 2nd SDR, resume) - Platform issue (down/data stale/billing broken) — fix first, resume

Pause does not mean kill. Pause = diagnose + fix + relaunch within 7 days.
